

CENTRAL REVERSE POLARITY - CRP

To ensure the maximum influence on electrons, Ecoflow has developed a patented magnetic module known as Central Reverse Polarity (CRP) designed specifically to help move electrons. All matter that passes through a CRP field is subjected to the additional 'kick' of three opposed directional forces. This action provides better environment for molecular change by the alignment of electrons. In other words, molecules that exit a CRP field are more efficient. The CRP modules' configuration also provides a field that is focused in one direction and shielded on the reverse, providing a more concentrated field.

LIVING BODIES

All living bodies are a mass of electrical communication, each one finely balanced and producing its own unique electromagnetic field. The efficient operation of the body's communication channels is therefore wholly dependent on its 'information 'super-highway', a group of essential and balanced electrolytes that carry charges and therefore information from one cell to another around the body. The function and movement of every cell in a living body is dependent on the transfer of electrical communication. Without this communication there is no life. The balance and efficient operation of the electrolytes also influences the level of lactic acid and is therefore responsible for the maintenance of the correct physiological balance of acids and alkalis (pH), which is essential to all life and is also the information base of pain. Key functions of pH are to control the amount of oxygen carried in the blood by haemoglobin, and to control blood circulation through interaction with the capillaries. All changes in living cells are electrochemical. Negative changes can cause cellular stress and are triggered by a number of internal and external factors, including radiation and electrolyte imbalance.

MAGNOTHERAPY

Magnotherapy is the application of a magnetic field to living tissue. It has been used to help relieve aches and pains and to accelerate healing for thousands of years and has gained rapid popularity in recent times for three reasons.

The quest for natural remedies as an alternative to synthetic medication and drugs.

The advancement and better understanding of magnet technology and nano-technology.

The public awareness created by the phenomenal success of Ecoflow's Bioflow range.

Whereas modern drugs are targeted at various medical conditions, Magnotherapy supports the maintenance of the body's basic essentials - its communication and transportation systems.

Magnotherapy helps in two primary areas.

It helps the electrolytes pass information by maintaining the electrical conductivity of living cells. It encourages processes that produce ions containing oxygen with strong oxidising or reducing capabilities that help to maintain the pH balance.

Most of the conditions that Magnotherapy has helped are a direct result of the above as they are all dependent on a healthy pH balance. Arthritis, sports injuries, poor circulation, blood pressure, skin

complaints, fatigue syndrome as well as general aches and pains are just a few of the many conditions that can be eased by Magnotherapy.
