

BIOGUARD AND BIOPHONE

Health warnings against the harmful effects of non-ionising electromagnetic radiation particularly that produced by mobile phones are well documented by many leading experts including the General Secretary of the World Health Organisation and numerous government advisors.

The electrical charge of every cell in a living body produces its own resonance, which interacts and communicates with the known resonance of the neighbouring cells. Radiation pollution from alien sources (e.g. phones, photocopiers and power lines) introduce waves that can distort the body's natural resonance leading to a breakdown in intercellular communication and the health symptoms associated with electromagnetic radiation.

Traditional methods of measuring damage caused by electromagnetic radiation have not focused on the real issue, that of biological resonance. A considerable body of knowledge has now been gathered on bio-resonance, which has led to a method of countering the harmful radiation through biofeedback.

The scientific principle used to counter harmful frequencies is known as Destructive Wave Interference. When a cell receives an alien resonance it enters a "stress mode" which produces a change in its own oscillations. Returning, or 'mirroring', the bio-resonance frequency to the cell effectively cancels the destructive powers of the alien frequency. This process, known as biofeedback, is a well known phenomenon and although originally researched in the United States more than 60 years ago, it is the ex-Soviet countries that have pioneered the science to the current level of understanding, aided more recently by specialist computerised analysing equipment.

The Bioguard and Biophone are the result of many years research by Professor Svetla Danev into the intercellular reaction promoted by electromagnetic resonance. The products contain inorganic crystals that are tuned to be receptive to basic life-form frequencies and will 'mirror' all incoming bio-resonance within this band. The feedback of the cells' own oscillations then helps to neutralise the impact that the ELF and VLF wave would otherwise have caused.

FREQUENTLY ASKED QUESTIONS ABOUT BIOPHONE AND BIOGUARD

Q. Why do I need a Bioguard or Biophone when I do not suffer any problems?

A. It is the long-term effects that are of prime concern. It took many years (too late for thousands of people) before it was accepted that asbestos is carcinogenic and that smoking tobacco could damage your health. Why take the risk

Q. Do I need both products?

A. Probably not, but some people will want to wear both just the same. Of the two we would recommend Bioguard for overall protection.

Q. How long does a Bioguard or Biophone last ?

A. The crystal structures in the Bioguard and Biophone are expected to perform for two-year period. The product should then be replaced.
